

## DeLime Imaging Product Photography New Website

DeLime Imaging Product Photography has just completed another update of the company's website [www.DeLimeImaging.com](http://www.DeLimeImaging.com). The improvements include a new visual template, new rotating and still photography samples in the galleries and a presentation of DeLime's website development experience.

Jim Morrison, DeLime Imaging Product Photography's CEO and Chief Photographer, says "This updated website is another great improvement for our business and underscores DeLime's in house web development capabilities. This new site provides our customers with a more complete picture of what DeLime Imaging is all about."

DeLime Imaging specializes in 360 degree rotating object and high resolution product photography for Internet applications. The 360 degree rotating images are viewer controllable, with the ability to control both the speed and the direction of rotation. DeLime Imaging offers its clients a number of image control options and sizes with its rotating images.

DeLime Imaging provides high resolution product photographs and lower resolution website-ready product pictures. The high resolution photographs may be used in print media or on a website to provide images that offer the opportunity to view important magnified details of a product with great clarity. For pictures ready to be inserted into a website, DeLime Imaging offers photographs that are customized to the client's size specifications in the standard Internet format.

DeLime Imaging can be found on the Internet at <http://www.DeLimeImaging.com>. The website includes multiple galleries of DeLime Imaging's photographs, including interactive rotating images, product animation images, high resolution photographs and website ready pictures.
